

GECKO | ADHESIVE TEXTILES | EDUCATION | CULTURE

CREATIVITY ABOVE ALL

Design College, Basel, Switzerland

Architects:

Hermann Baur, Hans Peter Baur, Franz Bräunig, and Arthur Dürig, Basel

Initial situation:

The Mason's Hall of the former Vocational School of Basel were redesigned and transformed into two distinct rooms, separated by a glass partition. The lively cafeteria area thereby conflicted with the lecture and examination area.

Solution:

Création Baumann's Gecko Crypta proved to be the ideal solution. This durable adhesive fabric offers reliable privacy assurance as well as being diaphanous - and the fleece structure emphasizes the character of the concrete building.

Product:

Gecko Crypta
