

Good room acoustics now also with sound absorbing roller blinds

Création Baumann is expanding its worldwide unique acoustic collection with functional sound absorbing roller blinds.

Musiktheater im Revier Gelsenkirchen / Umbria R

Yet again, the Systems Collection from Création Baumann demonstrates the Langenthal based textile specialist's creativity and innovation within the sector of interior shading systems and functional textiles. This year new products for the roller blind, panel and vertical blind sectors will not just be generating a good ambience in the contract sector but also in residential furnishing. They can be used to regulate and control visibility and glare as well as to absorb sound.

The highly functional and transparent "Primacoustic" fabric for example is now also available as a sound absorbing roller blind. "Primacoustic R" whose colouring ranges from white, to light grey and anthracite and is available in a roller blind width of 250 cm which is perfect for office environments. "Umbria R", the versatile classic also possesses sound absorbing properties as a roller blind. The broad colour palette which ranges from pastel hues and neutral tones to intensive colours is particularly exciting. Flame-retardant roller blinds in Trevira CS were used to renovate the "Musiktheater im Revier", in Gelsenkirchen (Germany). More than seventy electronic blinds, which can all be individually controlled have been used to optimise sound quality in the concert hall. Depending on the genre of music, the specially customised blinds in "Umbria R" quality are used to a greater or lesser extent to optimise the sound quality. Owing to the applied technology and the specially customised black, the blinds fade optically into the background.

Thus calm returns to the office and public buildings. The sound absorbing roller blinds supplement the innovative, worldwide unique, acoustic collection by Création Baumann.
