October 2021

**CRÉATION BAUMANN DEVELOPS NEW NOISEBLOCKER TECHNOLOGY FOR EFFICIENT SOUND INSULATION**

**Création Baumann presents the highly functional ACOUSTIC DIVIDER VARIO system with the innovative NOISEBLOCKER technology for acoustically flexible room partitioning. For the ACOUSTIC DIVIDER VARIO with NOISEBLOCKER, Création Baumann uses a self-developed core made of synthetic rubber as a sound-absorbing membrane. Uniquely, the ACOUSTIC DIVIDER VARIO with NOISEBLOCKER achieves a reduction of 23 dB with only one inner layer and thus meets the requirements for highly effective sound insulation.**

**Highly effective and aesthetic sound insulation with only one layer**

The Swiss textile specialist has developed a soft, flexible membrane made of synthetic rubber for textile and flexible sound insulation that meets the requirements for highly effective sound insulation. For the three-layer partition curtain system, the NOISEBLOCKER is surrounded by one layer of acoustic fabric each on the front and back. The acoustic fabrics can be freely selected from Création Baumann's comprehensive range. The sound insulation of the NOISEBLOCKER and the sound absorption of the acoustic fabrics create the innovative ACOUSTIC DIVIDER VARIO system with NOISEBLOCKER, which shields 23dB of sound and is still flexible.

### **Highly effective sound insulation without structural measures**

Acoustic optimisation is essential, especially in open spaces with smooth surfaces such as glass, parquet and concrete. Temporary zoning with the ACOUSTIC DIVIDER VARIO with NOISEBLOCKER allows rooms to be used in a hybrid way - quiet zones enable concentrated work or undisturbed telephoning without affecting the open structure or requiring structural measures. Even in private rooms or for the home office, the ACOUSTIC DIVIDER VARIO with NOISEBLOCKER can be used to structure open areas and design them acoustically and aesthetically.

### **Innovation leader in the field of highly efficient acoustic solutions**

With the ACOUSTIC DIVIDER VARIO with NOISEBLOCKER, Création Baumann consolidates its pioneering role in the production of highly functional and aesthetic acoustic solutions for different frequency ranges. The textile specialist repeatedly participates in research projects of leading universities to develop highly efficient and novel textile solutions for interior design. With the ACOUSTIC DIVIDER VARIO with NOISEBLOCKER, Création Baumann presents an innovative system that is unique worldwide and thus once again underpins its acoustic competence on the market.

### ABOUT CRÉATION BAUMANN

The forward-looking Swiss family business Création Baumann, based in Langenthal, has been one of the world's leading textile producers for more than 130 years. High-quality and sustainable materials, timeless design and the demand for high production quality determine the textile collections, which comprise more than 600 products and 6000 colours.

The portfolio covers curtain, decorative, furniture, outdoor and functional textiles for the private and contract market. In addition, Création Baumann offers tailor-made, innovative shading systems for interiors and has the world's largest range of opaque and transparent acoustic fabrics.

Since the product development, the design studio as well as the production are located in Langenthal, Création Baumann controls the entire manufacturing process from the idea to the processing of the yarn to the finished fabric and proves its passion for unique and innovative fabrics again and again.
