## STITCH PATTERN

The Swiss Octapharma AG company has fitted Création Baumann roller blinds with a sporty laser design at its subsidiary in Springe near Hanover (Germany).

### **Object**

Octapharma, Springe (near Hanover), Germany

### **Concept**

Architekturwerkstatt Andrea Susan Gütthge, Schönebeck, Germany

### **INITIAL SITUATION**

Octapharma, Hersteller von Plasmapräparaten, investiert kontinuierlich in den Ausbau der Produktionsanlagen. Der Neubau der Octapharma besticht durch seine moderne Glasfassade. Jedoch bietet diese keinerlei Schutz vor Einsicht und Sonneneinstrahlung. Octapharma produces plasma products and invests continuously in the development of its production facilities. The new Octapharma building stands out for its modern glass façade. However, this offers no protection whatsoever from outside view or solar radiation.

### **SOLUTION**

The decision was made to use roller blinds made of functional fabrics as a basic product for individually-adjustable glare and privacy protection. The same Shade Laser Stitch functional textile, with its stitch pattern laser motif, was used as an additional design element in various areas. Some of the roller blinds were manually operated, while some were fitted with an electronic drive.
