## COMMUNICATIVE TURNING POINT

Surprising lightness and elegance in the new single-storey room in the residential development for the elderly

### **Object**

Residential development for the elderly,  
Arbon, Switzerland

### **Concept**

Singer Baenziger Architects, Zurich

### **Photos**

Christian Senti, Zürich

### **STRATING POINT**

The residents also use the new communal room as a lounge area on a day-to-day basis. The room is built in an exposed concrete style to match the existing architecture. The coffered ceiling gives the room a veneer of importance as well as a convivial and almost sacred feel.

### **SOLUTION**

Curtains in the colour scheme of when the room was built in 1980 were chosen to give it a cosy atmosphere, support its acoustics and act as a blackout solution.
